### WHICH ARE THE SYMPTOMS of dry eye?

- ✓ Redness
- ✓ Stinging
- ✓ Itching
- ✓ Foreign body sensation
- ✓ Sensitivity to light
- ✓ Blurred vision

An innovative food supplement.

A liquid formulation of powdered Maqui berries fruit extract (*Aristotelia chilensis*) (**MaquiBright®**) complexed with selected phospholipids for optimized bioavailability.

**MaquiBright®** is a natural source of Anthocyanins and Delphinidins.

#### Pre-clinical studies have demonstrated that:

- **MaquiBright®** and its anthocyanins are highly absorbed by lachrymal gland cells, where they suppress reactive oxygen species (ROS) and restores healthy tear fluid production.
- **MaquiBright®** protects photoreceptor cells from light-induced cell death.

Double-blind placebo controlled study confirmed that **MaquiBright®** significantly enhances tear fluid production and relieves dry-eye related symptoms in people with this condition.
